

Auto Detailing Tips & Tricks

Detailing Tips from the Pros!

Don't use abrasive cleaners and chemicals to remove tree sap from your vehicle. Simply use **Rubbing Alcohol!**

Save your paint! Throw away your snow brushes and replace them with a **Snow Brum Original Snow Removal Tool!**

Clean your Glass in 2 directions!

When drying your glass, do the final wipe of interior glass in a horizontal or vertical direction - then, on the exterior, in the opposite direction. This will help you see streaks. Always use two towels: one for applying the glass cleaner and one for drying the haze.

Got Pets? Use FurzOFF!

This is the best tool we have ever found to remove pet hair - and it's environmentally friendly. Simply swipe it over the carpets or fabric seats to easily remove pet hair while vacuuming. Just be careful to avoid the plastic interior trim as it will scratch it.

Use Two Buckets!

Washing your own vehicle? Then use 2 buckets! One for soap - and one for fresh water. Use the soap bucket to apply - and rinse your microfiber towel/mit in the other. This will help reduce scratches and swirls from the dirty water.

Steel Wool

Want to clean chrome or windows with heavy grime? Don't be afraid to use #000 Steel Wool. It will not scratch glass or chrome - and leave the surface perfectly smooth with a light shine. Simply apply glass cleaner and rub gently with the steel wool - dry with a towel. EASY!

Floor Mats

Looking for rubber floor mats this winter? Buy **WeatherTech.com**. These are the best mats available and have a warranty as well. The **DigitalFit** are our personal favorites as they are laser cut to each specific vehicle.
